

generative-fill

Setup the environment

You may need to create virtual environment and install dependent Python package by running the following command under the source directory:

```
python -m venv venv
source venv/bin/activate
pip install -r requirements.txt
```

Run the webui

You may need to export specific environment variable and then run ui.py

```
export sagemaker_endpoint=[your_async_sagemaker_endpoint_name]
python ui.py
```

Note: Here your async SageMaker endpoint should be accessible under the current awscli configure or IAM role authentication.
